

# POR01PG20-12 [TerraRosa]

A red skinned and red fleshed oblong specialty fresh potato

- High specific gravity
- Excellent Culinary Quality
- Few Tuber Defects
- Skin Color & Flesh Color
- PA97B35-2 x PA97B29-3

## Disease Ratings

Early dying	resistant
Scab	resistant
PVY	mod susceptible
PLRV	resistant
Net Necrosis	mod resistant
Late Blight Foliar	susceptible
Late Blight Tuber	susceptible

**TerraRosa (POR01PG20-12) is scheduled to be released in 2012.** It is a mid season specialty potato with red skin and red flesh. This selection is unique among commercially available varieties for the oblong tubers with a very high culinary quality. Tubers are ideal for microwave, frying or baking. Chips made from retain their rosy color and resist fading.

Tubers are smooth with shallow eyes that are well distributed across the tuber. It produces somewhat lower yields than *Dark Red Norland* and *Red LaSoda* in regional specialty trials conducted in 2006 and 2007.

**TerraRosa** needs to be handled gently to prevent skinning during harvest. It has few surface blemishes and internal problems, significantly less than those found on *Red LaSoda*.

**TerraRosa** has only medium storage capability and medium to high fertility requirements. It has been found to be resistant to Metribuzin.
